2ww ICE PANEL

Message for the top of the 2ww ICE Panel:

The use of this 2ww panel is not mandatory. It is to assist GPs request necessary 2ww tests, enable timely referrals and support the patient to be sent direct to investigation or avoid unnecessary investigations. Additional tests may be required; this panel should be used in conjunction with the 2ww referral form.

Tumour site	Necessary Tests	Tumour site Test Notes box If possible please align blood flag alerts with the 'Request if not done within xx weeks' time line for each tumour site.
Brain	Na K eGFR	Request if not done within 4 weeks. Refer to 2wwr forms to check for other requirements.
Gynaecological	<u>Gynaecology</u> Creatinine eGFR, <u>Gynaecology Ovarian</u> Creatinine eGFR CA125	Request if not done within 4 weeks. Refer to 2wwr forms to check for other requirements.
Haematological	<u>Lymphoma:</u> FBC, LDH, eGFR, U&E, Bone profile. <u>Myeloma:</u> FBC, eGFR, U&E, Bone profile, Liver function, LDH, Immunoglobulins & serum protein electrophoresis	Request if not done within 4 weeks. Myeloma: Urine BJP form is required, please print and give patient instructions on time lines. Patients with unexplained lymphadenopathy require tissue diagnosis BEFORE referral to haematology. Please discuss with surgical team or refer using local guidelines. Refer to 2wwr forms to check for other requirements.
Sarcoma	FBC, INR	Request if not done within 6 weeks. If Unexplained Soft Tissue Lump increasing in size – ultrasound scan is required If Bone Sarcoma Suspected – perform a plain film X-ray is required

		Refer to 2wwr forms to check for other requirements.
Thyroid	TFTs	Request if not done within 3 months. Refer to 2wwr forms to check for other requirements.
Lung	Platelets Ca Clotting Bone LFT eGFR	Request if not done within 4 weeks. Refer to 2wwr forms to check for other requirements.
Iron Deficiency Anaemia	Hb MCV Ferritin TTG antibodies Na K GFR CKD status Bili ALP ALT Alb FIT	Request if not done within 3 months. FIT test only Pre- Menopausal women. Positive <i>FIT</i> is useful in investigating pre-menopausal women with IDA to exclude a lower GI cause of anaemia –NB it does not exclude upper GI pathology) 2wwr Urine dip stick, Urinalysis microscopic haematuria, tick positive or negative If ferritin results are normal & suspicion of IDA (Ferritin unreliable in inflammatory conditions) then check: Transferrin saturation % TIBC or UIBC Refer to 2wwr forms to check for other requirements.
Lower GI	Hb Na K eGFR FIT	Request if not done within 3 months. Refer to 2wwr forms to check for other requirements.
Prostate	Hb eGFR PSA	Request if not done within 4 weeks. Urine dip stick required. 2nd PSA may be applicable. Repeating a PSA helps guide prostate cancer risk and influences the order and timing of further investigations Refer to 2wwr forms to check for other requirements.
Breast - Male	U&Es LFTs TSH LH FSH LDH AFP HCG Oestradiol Testosterone	Recent bloods are required (6 weeks) Refer to 2wwr forms to check for other requirements.
